# Activity 1: Babylist: Make an Intangible Service Easy to Trust

Course C233

## Objective

Explain the business impact and benefits of tangible service-brand proof

## Documented real-event basis

Shopify presents Babylist as a service-brand example and describes service branding as building a recognisable identity and experience around an intangible offering.

## Scenario

A Singapore family-services platform combines consultations, curated recommendations and digital planning tools. Growth has slowed because prospects cannot see why the service is more valuable than free online advice.

## Primary source

https://www.shopify.com/sg/blog/service-branding

## Training assumptions

• The Singapore platform, customer interviews and commercial figures are fictional training inputs, not Babylist disclosures.

• Mock research shows first-time parents value reassurance, time saved and unbiased recommendations.

• The current landing page leads with features and has no process map, expert proof or outcome story.

• Management will fund one 90-day proof-building initiative before changing price.

## Questions

1. Which functional, financial, time and social risks affect the customer's decision?

2. What brand benefits could matter to customers, employees and the business?

3. Which three tangible cues would make the promise easier to trust?

4. What is the defensible competitive advantage, and what evidence is still missing?

## Expected output

One-page service-brand value map and prioritised proof plan

## Acceptance test

The submission separates facts from assumptions, links at least three proof cues to customer risk and business benefit, and states a defensible advantage with validation evidence.
