Activity 7: Singapore Airlines: Design a Balanced Brand-Impact Scorecard

Course C233

Objective

Evaluate service-brand impact using balanced evidence

Documented real-event basis

Singapore Airlines publicly describes a longstanding focus on service excellence, innovation and the Singapore Girl as part of its brand story.

Scenario

A fictional premium regional airline wants to test whether its 'Thoughtful journeys, every time' promise is being delivered consistently across booking, airport, cabin and disruption recovery.

Primary source

https://www.singaporeair.com/en_UK/us/about-us/our-story/

Training assumptions

• The airline, promise and dataset are fictional and must not be attributed to Singapore Airlines.

• The mock data includes employee confidence, departure communication, first-contact resolution, effort, satisfaction, complaints and repeat booking.

• The dashboard has space for eight measures and must support a monthly management decision.

• Safety and regulatory measures remain separate hard constraints and cannot be traded for experience scores.

Questions

1. Which leading and lagging measures best test the promise?

2. How should results be segmented to expose inconsistency?

3. Which metric definitions or data sources could mislead management?

4. What threshold should trigger action, and who owns the response?

Expected output

Eight-metric brand-impact scorecard, KPI dictionary and review agenda

Acceptance test

Every KPI has a decision, definition, source, owner and threshold; the set balances four evidence lenses; and the analysis identifies a segment-level action without unsupported causal claims.
